PRODUCT GUIDE

SUPER SHOES

SUPER SHOES

Thank you for your interest in establishing an account with Super Shoes, and allowing us to customize a program that will ensure that your employees' risk from injury at work is minimized. Our goal is to work with you to determine the best options, based on your needs, and making sure that those products will perform in the environments that your employees experience daily. We would embrace the opportunity to visit your facility and provide an assessment of the safety hazards present and provide you with footwear options best suited to reduce injury risk from those hazards. Once we have determined the best options for you we would make those styles, and only those styles, available for your employees to select from. We have 39 stores along the east coast from Virginia to Maine with our average store carrying over 75 different styles of safety footwear and some of our larger stores carrying in excess of 125 styles. We have experienced and knowledgeable managers and associates who can assist in fitting and selecting the proper footwear. **Setting up an account is easy - simply send in a completed application. Approval typically takes less than 2 weeks.**

Here are some of the areas where the proper footwear would reduce the risk of injury to your employees:

Compression and Impact (falling objects)

- I/C - Safety Toe Footwear
- MT - Metatarsal Protective (Met-Guard) Footwear

Slippery Surfaces

- SR - Slip Resistant Footwear. Each style is tested in accordance with ASTM F2913-19.

Electrical Hazards as well as Static Electricity

- EH - Electrical Hazard Footwear
- SD - Static Dissipative Footwear
- CD - Conductive Footwear

Penetration of sharp objects to the bottom of the foot.

- PR - Puncture Resistant Footwear

We can also provide footwear that can protect against Chemical Exposure and Extreme Heat Exposure.

Again, thank you for considering Super Shoes as your source for safety footwear. Feel free to contact us with any questions or concerns you may have. We look forward to speaking with you soon.

	Medium (fits shoe size 9-12.5)
Men's	Medium (fits shoe size 8-11.5)
	Large (fits shoe size 12-16)

FINDING YOUR PERFECT BOOT ATTRIBUTES

ASTM F2413 - The official standard for safety footwear in the United States.

Safety Toe - Non-corrosive toe caps used in footwear to provide protection for the toe area.

Composite Toe - A toe cap made from a non-ferrous elastomeric material, which is light weight and will not conduct heat, cold or electricity.

Slip Resistant - Soles designed and constructed with materials to provide maximum resistance on slippery conditions.

Electrical Hazard - Footwear tested by an independent lab that can withstand applications of 18,000 volts at 60Hz for one minute without leakage or flow in excess of 1.0mA.

SD - Static Dissipative footwear absorbs and neutralizes loose electrons, sending charges into the floor.

Insulated - Footwear that provides varying levels of protection against the cold depending on the amount of insulating fabric used.

WE CAN MAKE SURE YOU HAVE THE RIGHT TOOLS FOR YOUR JOB.

At least when it comes to
your footwear.
